***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.  
(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim(s) 6-8 is/are rejected under 35 U.S.C. 102(b) as being anticipated by

*Emory et al.* (US 6,378,774 B1)

*Emory et al.* discloses a reader/writer comprising:

an antenna substrate (i.e. coil loop 4) provided with a loop antenna; and  
a control substrate having IC 6 provided with a coil (i.e. coil 8) and with a transmitting/receiving circuit; wherein a magnetic coupling between the coil and the loop antenna causes the loop antenna and the transmitting/receiving circuit to be electrically connected to each other (see Fig. 2, col. 9 lines 51-60).

Re claim 7, *Emory et al.* discloses the reader/writer according to Claim 6, wherein a (interpreted as "any") magnetic body (interpreted as the card substrate housing all antenna elements which generates magnetic/electromagnetic field when

Art Unit: 2887

electromagnetically activated) is arranged on a surface of the antenna substrate facing the control substrate (i.e. substrate 10), and the coil 8 and the loop antenna 4 are magnetically coupled through a space (interpreted as available volume with no other elements are included therein) defined by the magnetic body (see Figs. 3A-3B, 12A).

Re claim 8, *Emory et al.* discloses the reader/writer according to Claim 6, wherein the coil (i.e. coil 8) provided on the control substrate 10 is positioned inside an inner portion of the loop antenna 4 and adjacent to the inner portion of the loop antenna (Figs. 3A-3B, 12A-12B).
